Skyblade Hunt / SkyDrake22

Verified reduced-mesh repair; Candidate21 remains the rollback package.

What improved

Localized neck, chest and shoulder skin weights reduce pinching during existing clips.
Playable attack-region peak edge stretch: 4.18x to 1.95x; neck: 2.86x to 1.67x.
All 14 playable clips improve local maximum, neck maximum and local P99 stretch.
No increase in peak counts of triangles compressed below 10% of their rest area.
This is improved deformation, not perfect likeness or an absence of all creasing.

What is preserved

Only dist/assets/skydrake-rc15.glb differs from Candidate21 in the 46-file package.
Only joint/weight accessor bytes change inside the localized body/shoulder mask.
Rest geometry, normals, UVs, textures, 39 bones and 14 clips are byte-identical.
Chomp19, Stormbelly20, gameplay, HUD, controls, save keys and hosting identity remain.

Verification

Exact package: 250 gameplay/repair, 340 repeated-flow and 320 startup/recovery checks.
Normal frame-loop keyboard/pause/resume smoke: 8 checks. Portable launch checked separately.
18 gait scenarios / 162 checks and 6 combat runs / 24 checks include both trial variants.
1,148 after-pose samples, 1,148 baseline samples; 198 matched gameplay screenshots.
Editable reduced Blender source reopens with packed images and matching weights.

Rejected full-resolution trial

Full trial A adds one compressed stagger triangle (peak 2 versus 1 baseline).
Full trial C adds a compressed turn triangle. Neither is promoted as accepted full art.
The playable reduced mesh uses trial C; accepted high-resolution fallback remains SkyDrake15.
Unaccepted full files and metrics are clearly retained as experiments, not package assets.

Remaining art work and practical limit

SkyDrake: eye whites/eyelids, muzzle, wing/tail profiles, texture seams and extreme hip creases.
Chomp: rounded muzzle/forehead, wrinkles and tooth spacing still approximate the supplied art.
Stormbelly: eye expression, lower jaw/lip shape and surface grooves remain approximate.
A sculptor-led silhouette/face pass, joint-aware retopology and rebaked textures are the next useful step. Further broad weight diffusion trades one pose defect for another.

Run / delivery

Extract Skyblade-Final-Local-Candidate22.zip; with Node.js installed run: node serve.cjs
Open http://127.0.0.1:4329/ in a separate browser profile. Stop with Ctrl+C.
Publication remains held. No physical phone/controller, full playthrough or FPS claim.
Library helper was unavailable at checkpoint21; no bypass or unchanged retry in this pass.

Exact identity

Base commit: 1e1975ffe83fb636dab097553ee662c00a324eff
Source: art/overhaul/final-local-candidate22/release
Manifest SHA-256: 540393857aa94ff0aabb6d7cc8104bc50837845216cf43ae891337de0935606e
Final commit, ZIP hash and portable launch result: Skyblade-checkpoint22-receipt.json.

Deformation before / after

SKYDRAKE22 / LOCALIZED DEFORMATION REPAIR

Playable reduced mesh. Same rest geometry, rig, clips, texture, camera and authored clip times.

CANDIDATE21 / BEFORE

CANDIDATE22 / AFTER

Attack 92.5%: regional peak stretch 4.18x -> 1.95x; neck 2.86x -> 1.67x

Windup 82.5%: skin-weight transitions smoothed; topology is unchanged

Tail windup 100%: regional peak stretch 2.06x -> 1.98x

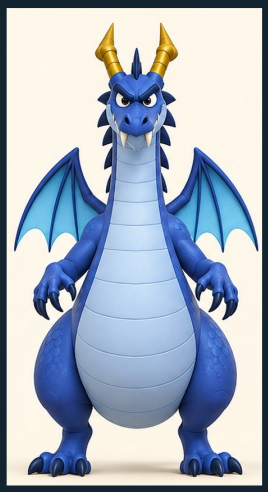

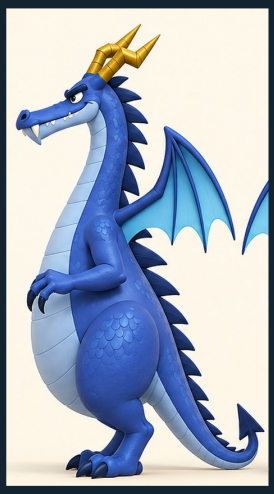

Improved, not eliminated: elbow/hip creasing, texture seams and facial likeness still need authored refinement.

Supplied reference / preserved silhouette

SKYDRAKE22 / REFERENCE AND PRESERVED SILHOUETTE

Supplied illustration uses a different pose/projection. Only skin weights changed in this pass.

	SUPPLIED TURNAROUND	CANDIDATE21	CANDIDATE22
FRONT			
SIDE			

Remaining likeness gaps: protruding eye whites, eyelid/muzzle shape, thin wing membranes, tail profile and surface detail.

These require a deliberate sculpt/retopology and texture-bake pass; further weight diffusion will not repair them.

Existing gameplay / normal frame loop

SKYDRAKE22 / EXISTING GAMEPLAY CHECK

Production animation adapter and camera. Fixed scene/RNG; controlled invulnerable fixture, not a playthrough.

CANDIDATE21 ASSET

CANDIDATE22 ASSET

Ground tail attack: same player, camera and action timing

Air attack: same takeoff, windup and swoop sequence

Normal frame loop: real keyboard movement, Pause and Resume; existing HUD retained.

No physical controller/phone or hardware FPS claim. Candidate21 remains the tested rollback package.
